

4.4 Surface Area of a Right Triangular Prism – Notes

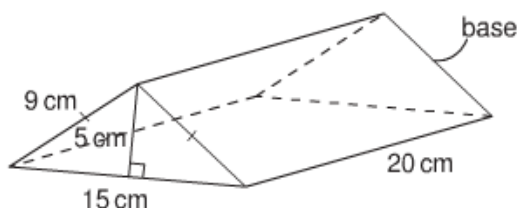

What is the area of this rectangle?

$$\begin{aligned} A_{\text{rectangle}} &= b \times h \\ &= 6 \times 3 \\ &= 18 \text{ cm}^2 \end{aligned}$$

Here is a right triangular prism.

Draw a net of this prism.

Label the 5 shapes A to E.

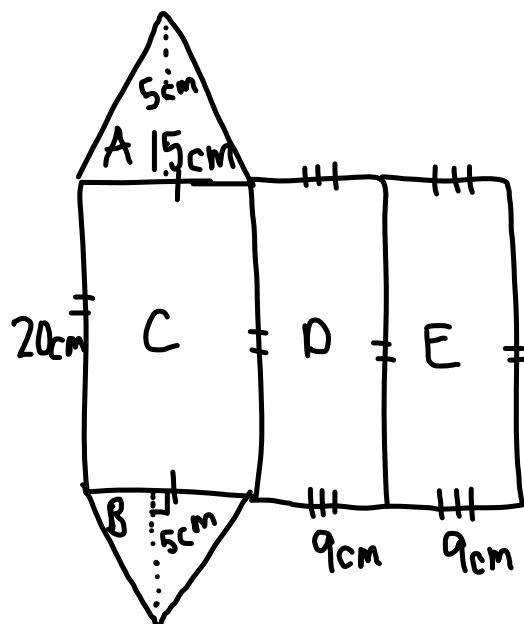

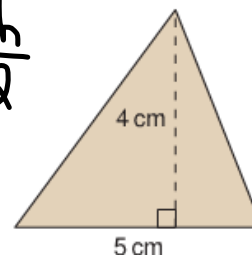

Find the area of each rectangle.

$$A = \frac{15 \times 5}{2} = \frac{75}{2} = 37.5$$

$$B = \frac{15 \times 5}{2} = \frac{75}{2} = 37.5$$

What is the area of this triangle?

$$\begin{aligned} A_{\text{triangle}} &= \frac{bh}{2} \\ &= \frac{5 \times 4}{2} \\ &= \frac{20}{2} \\ &= 10 \text{ cm}^2 \end{aligned}$$

$$C = 15 \times 20 = 300$$

$$D = 9 \times 20 = 180$$

$$E = 9 \times 20 = 180$$

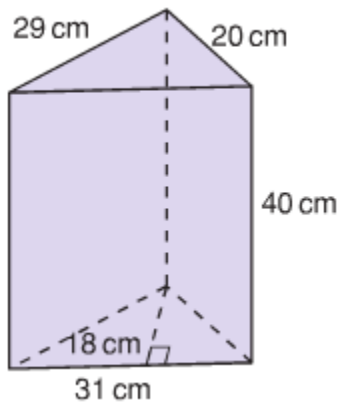

The surface area of the triangular prisms is the sum of the 5 areas.

$$S.A_{\text{T.P.}} = 37.5 + 37.5 + 300 + 180 + 180 = 735 \text{ cm}^2$$

Example (2):

Find the surface area of this triangular prism.

Draw its net if it helps!

$$\text{Top} \& \text{Bottom: } 2 \left(\frac{31 \times 18}{2} \right) = 558$$

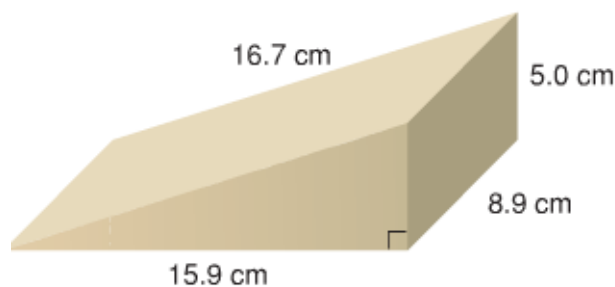

$$\text{Front: } 31 \times 40 = 1240$$

$$\text{Left: } 28 \times 40 = 1120$$

$$\text{right: } 20 \times 40 = 800$$

$$\begin{aligned} S.A_{TP} &= 558 + 1240 + 1120 + 800 \\ &= 3718 \text{ cm}^2 \end{aligned}$$

Example (3): A wooden doorstop is a triangular prism. It is to be painted. The bottom rectangular face is covered with rubber and will not be painted. Find the total surface area to be painted.

$$\text{Front} \& \text{Back: } 2 \left(\frac{15.9 \times 8.9}{2} \right) = 79.5$$

$$\text{right: } 5 \times 8.9 = 44.5$$

$$\text{top: } 16.7 \times 8.9 = 148.63$$

$$\begin{aligned} S.A_{TP} &= 79.5 + 44.5 + 148.63 \\ &= 272.63 \text{ cm}^2 \end{aligned}$$
