

8.3 Perpendicular Bisectors - Notes

Definition - When you draw a line to divide a line segment into two equal parts, you BISECT the segment

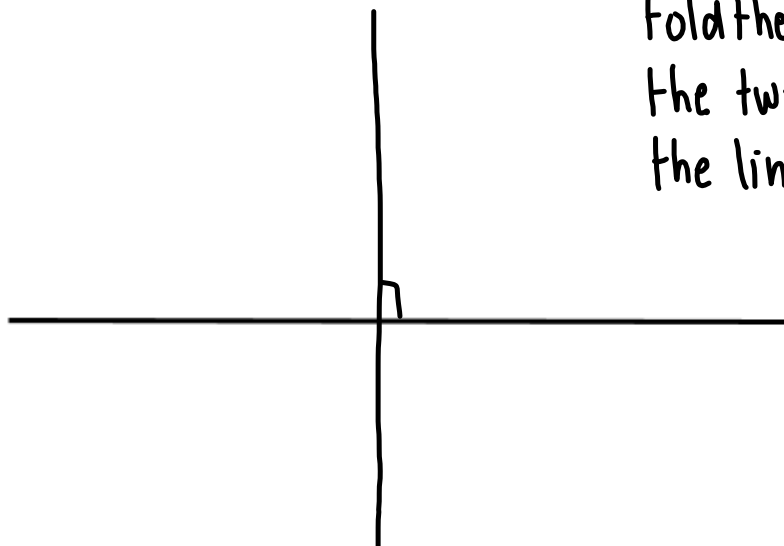

Definition - When the bisector is drawn at right angles to the segment the line is a perpendicular bisector of the segment.

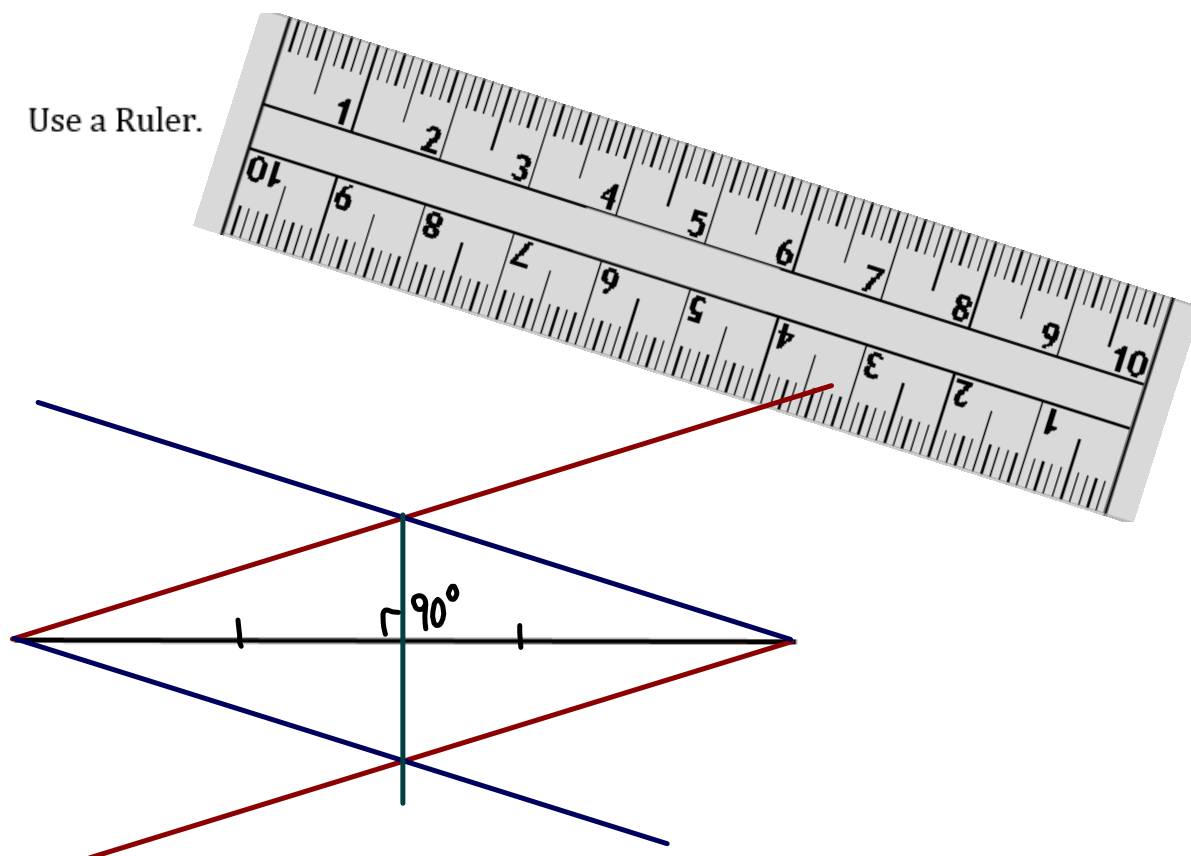

3 Ways to Construct Perpendicular Bisectors

1. Paper Folding.

Fold the paper so
the two endpoints and
the line perfectly
match.

2. Use a Ruler.

3. Use a Ruler and Compass.
