

## Range

April 26, 2018

- Range is NOT a measure of central tendency.
- The range tells us the spread of the data.
- It is the difference between the largest and Smallest number in a data set.

$$* \text{Range} = \text{Largest Number} - \text{Smallest Number} *$$

ex: 71, 65, 62, 71, 84, 63

$$\text{Range} = 84 - 62 = 22$$
